9 VIEWPOINT
Constant exposure to the operating theatre can change our perception of the perioperative journey
Rebecca Charnock
The author reflects on their own perioperative journey and their experience of interactions with hospital staff, and how that has impacted on their attitudes and practices in studying to become an operating department practitioner.

11 CLINICAL FEATURE
Wrong site surgery: A critical incident analysis of a near miss
S Tichanow
This article is a reflective account of a near miss that happened in clinical practice during a particularly busy operating list. This critical incident highlights issues that can arise from a breakdown of communication between members of a multidisciplinary team and demonstrates how ineffective teamwork can jeopardise a patient’s safety and wellbeing. It emphasises the effects of human factors on professional performance and how they can contribute to mistakes and misconducts. It also stresses the importance of reporting patient safety incidents so that the lessons can be learned and future practice improved.

19 CLINICAL FEATURE
Development and efficiency of dedicated upper limb trauma lists in a district general hospital
D Makki, HM Almajjari and N Saw
The aim of this audit was to assess the impact of dedicated upper limb trauma lists on the hospital stay and satisfaction of patients treated operatively for upper limb injuries. In first audit, we reviewed the data of 52 consecutive patients with upper limb injuries treated on the routine trauma lists. Accordingly, a new pathway of dedicated upper limb trauma lists was introduced whereby patients presenting with injuries were safely discharged home with written instructions regarding arrangements for surgery. The audit loop was then closed by collecting data of 78 consecutive patients treated using the new scheme.
